Lifestyle Behaviors & Academic Success Analysis

Title	Executive Summary	Relationship Analysis	Correlation Findings
-------	-------------------	-----------------------	----------------------

Executive Overview: Lifestyle Behaviors & Academic Success

Analyze 20,000 student records to examine how lifestyle behaviors such as study hours, sleep, phone usage, stress, and attendance influence productivity and academic success.

Student Performance Overview

Dataset Summary

- Records: 20,000
- Variables: 15
- Outcomes:
- Productivity Score
- Final Grade

Key Objectives

- Identify significant behavioral factors
- Measure relationships using correlation analysis
- Evaluate impact using regression analysis ..

Tools Used

- Tableau
- Microsoft Excel
- Correlation Analysis
- Regression Analysis

Key Insight

Study hours, sleep quality, and focus score strongly improved productivity score, while phone usage and stress negatively affected student productivity. Final grade demonstrated weaker behavioral relationships.

Lifestyle Behaviors & Academic Success Analysis

Title	Exceutive Summary	Relationship Analysis	Correlation Findings	Regressio n Findings
-------	-------------------	-----------------------	----------------------	-------------------------

Relationship Analysis

Scatter plot analysis showing relationships between behavioral factors and student productivity outcomes.

Insight
Productivity score increased with higher study hours and focus levels, while elevated stress levels demonstrated a negative relationship with student productivity outcomes.

Lifestyle Behaviors & Academic Success Analysis

Executive Summary	Relationship Analysis	Correlation Findings	Regression Findings	Conclusion and Recommendations
-------------------	-----------------------	----------------------	---------------------	--------------------------------

Correlation Findings

Correlation analysis measuring the strength and direction of relationships between behavioral variables and academic performance.

Correlation Summary Table		
Variable	Productivity Correlation	Final Grade Correlation
Study hours	0.73	-0.01
Sleep hours	0.34	0.01
Phone usage	-0.33	-0.01
Coffee intake	0.01	0.02
Exercise minutes	0.00	0.00
Assignments completed	0.00	0.00
Attendance percentage	0.18	-0.01
Stress Level	-0.20	-0.01
Focus score	0.41	0.00

Key Insights

Study hours, focus score, and sleep hours demonstrated the strongest positive relationships with productivity, while phone usage and stress level negatively affected productivity outcomes. Final grade correlations remained comparatively weak across behavioral variables.

Lifestyle Behaviors & Academic Success Analysis

Relationship ..	Correlation Findings	Regression Findings	Conclusion and Recommendations	
-----------------	----------------------	---------------------	--------------------------------	--

Regression Findings

Regression analysis evaluating the predictive impact of behavioral variables on productivity and final academic performance.

Regression Model Summary
Productivity R ² - 1.000
Final Grade R ² - 0.001
Productivity Significant Variables - 6
Final Grade Significant Variables - 1
Strongest Predictor - Study Hours

Insight

Regression analysis identified study hours, sleep hours, focus score, and attendance percentage as strong positive predictors of productivity, while phone usage and stress level negatively influenced productivity outcomes. Final academic grades demonstrated weak predictive relationships across all factors.

Lifestyle Behaviors & Academic Success Analysis

Correlation Findings	Regression Findings	Conclusion and Recommendations	
----------------------	---------------------	--------------------------------	--

Recommendations & Conclusion

Final analytical findings and actionable recommendations based on lifestyle behavior analysis of 20,000 student records.

Key Findings Summary

- Study hours demonstrated the strongest positive influence on productivity.
- Sleep quality and focus score significantly improved productivity outcomes.
- Phone usage and stress level negatively affected student productivity. ..

Stakeholder	Recommendation	Expected Impact
Students	Maintain consistent study schedules.	Improved productivity and academic engagement.
Students	Improve sleep habits and reduce phone distractions.	Better focus and study efficiency.
Educators	Promote stress management and focused learning practices.	Reduced stress and improved productivity.
Institutions	Develop mentoring and wellness programs.	Better academic support and student retention.
Institutions	Increase awareness of healthy study habits.	Improved student performance and well-being.

Final Conclusion

The analysis demonstrated that lifestyle behaviors strongly influence student productivity outcomes, particularly study habits, sleep quality, and focus levels. However, behavioral variables alone showed limited predictive impact on final academic grades, indicating that additional academic and environmental factors may contribute to grade performance.
